

Step 5

Multiply the actual number of M&M's by 200. Green M&M's will be multiplied by 500. This amount should be written in the *Total Number of Bushels* column.

Step 6

Calculate the number of bushels that remain by subtracting. You may have pre-sold too much. In that case, you will have a negative amount.

Step 7

Multiply the *Bushels Remaining* by \$1.50/bushel. Green M&M's are \$2.00/bushel. Calculate the *Amount Earned or Lost* and the total.

M & M Color	Actual Number of M & M's	Total Number of Bushels	Pre-Sold Corn Bushels	Bushels Remaining	Amount Earned or Lost
<i>Blue</i>					
<i>Brown</i>					
<i>Red</i>					
<i>Orange</i>					
<i>Yellow</i>					
<i>Green</i>					
				Total Amount Earned:	\$

Step 8

Did you over sell any corn?

How much money did you loss?

Calculate the total amount of money earned:

$$\underline{\hspace{10em}} + \underline{\hspace{10em}} = \underline{\hspace{10em}}$$

Total Pre-Sold Amount Total After Harvest Total Amount Earned
